

Wisconsin Sea Grant is a locally focused, federal-state partnership supporting research, education and outreach. For **49 years**, it has been fostering the sustainable use of Wisconsin's Great Lakes. **95%** of federal funds are invested in trusted, objective, science-based programming.

\$6,739,565 in leveraged funds
185% return on federal investment

From Discovery to Application: Science Transferred

Gone Fishing

Each year, Wisconsin issues **1.5 million** recreational fishing licenses. Those anglers add

\$2.1 billion to the economy. Fish, however, have been dying due to an invasive virus known as viral hemorrhagic septicemia. Sea Grant-funded scientists have developed rapid, non-lethal

tests for the virus, protecting the fishery and preserving recreational angler economic contributions.

BY THE NUMBERS

Saving Lives, Protecting Property

Sea Grant's social scientist provided expertise to the National Weather Service to refine hazardous weather warnings, which has a big impact because each year U.S. adults obtain **300 billion** weather forecasts. The goal was to offer more descriptive warnings, resulting in increased safety and better-protected property.

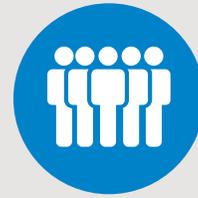

Clampdown on Corrosion

The Duluth-Superior port is the world's largest inland facility and generates **\$12.6 billion** in annual economic activity. About 10 years ago, steel in the port was corroding and crumbling at an accelerated rate. Sea Grant and partners figured out why and how to mitigate it. Now, every year, **millions of dollars** in infrastructure replacement costs are **saved**.

What's for Dinner?

Americans have a big appetite for fish, but **90%** of it is imported, sending dollars out of the country when perhaps we could grow our own for mass consumption. One Wisconsin company realizes the value of that business proposition and invested more than **\$10 million** into an on-land aquaponics facility that will employ up to **30 people** to raise fish and vegetables alongside each other. It wouldn't be happening without Sea Grant, and other partners, research and outreach support.
